

# Same Durable Protection - Without The Expense!

*Spraylat International Ltd Have Manufactured An Effective Alternative To Shrink Wrap - A Water Based Coating For Protection Of Boats And Yachts During Fabrication, Refurbishment and Transportation.*

One common question amongst boat owners is how to winterize their boat during the cold months. A leading process is shrink wrapping, however this may not only be expensive but time consuming and dangerous aswell.

Shrink wrap requires special, expensive tools, which is why owners generally ask for help from professional companies. A heat gun which runs at approximately 3,500 °C is the main cause of concern, without the help of professionals not only may the boat be scorched, but harm may come to the user aswell.

Another issue with shrink wrapped boats is the moisture accumulation, which could damage the electrical, finishes and adhesives and can allow mold to grow and smell, which is one of the components in allowing rot to develop in wood.

However there is a need to winterize boats, the time and effort spent protecting the boat during the winter will have a definite effect on the boat's performance come spring.

Spraylat International Ltd have manufactured a quick, easy and safe way to winterize boats during the cold seasons - Protectapeel Deckstrip. Protectapeel Deckstrip is a temporary peelable protective coating designed to protect non-porous surfaces from damage caused by; abrasion, staining, spillage, weathering and scratching.

Applied easily by airless spray gun or roller, Protectapeel Deckstrip dries to form a tough waterproof film that will protect surfaces such as; GRP, metals, stoved and cured paints for up to 12 months. When required, Protectapeel Deckstrip is simply removed by hand peeling - revealing a clean and undamaged boat ready for Spring!

Protectapeel protective coatings for the marine and shipping sector provide a weather resistant peelable coating.

The protective film will protect boats, yachts and ships during build, refit, transportation and winter storage.

Protectapeel is available for;

- Decking Protection
- Glass & Glazing Protection
- Teak Decking Protection
- Stainless Steel Protection
- Stair Protection
- Corrosion Protection

In addition to providing protection the Protectapeel coating will significantly reduce cleaning times and can be disposed of in domestic waste.

Protect your yacht during transportation by road or sea, including hull, decks and glass areas. Protectapeel is weather resistant, durable, tough and can withstand sea water, UV rays and highwinds.
