

PROTECTAPEEL

PAINT • PROTECT • PEEL

Protection during transit, storage and installation

Protectapeel is a weather resistant peelable coating designed to provide temporary protection to metal and a number of non-porous surfaces during transit, storage and installation. The liquid applied material will dry to form a skin-tight film that protects the surface from damage for up to 12 months.

Protectapeel is applied in liquid form by either airless spray gun, roller, brush or dip, making it an ideal product for small intricate components, unconventional and complex shapes. It's quick and easy application method also makes Protectapeel the smart way to protect large surface areas.

Protectapeel is a water-based environmentally friendly product

Protectapeel comes in an Anti-Rust version that not only protects the surface from dirt and damage but also prevents bare steel from rusting and corroding.

When required the water-based coating is simply peeled by hand, revealing an undamaged and clean surface. Once protectapeel is removed it can be condensed into a small ball and disposed of as domestic waste.

Protectapeel is easy to apply by spray, roller, brush or dip and provides protection for up to 12 months.

What can Protectapeel do for you?

Protects surfaces and components from damage.	✓
Protects from surface abrasion and dirt.	✓
Prevents degradation and rusting.	✓
Suitable for complex shapes.	✓
Quick and easy to apply.	✓
Water based & environmentally friendly product.	✓
