

Protect Your Site From Damage During Construction

Spraylat International will provide a free on-site demonstration

through every aspect of the product from purchase to peel. The technician will show those participating how to apply Protectapeel internally and externally with a roller and an airless spray gun.

The on-site team are then shown how to set up the spray gun, how to clean it after use and how to troubleshoot any issues which may arise. The application technician also demonstrates how to use a wet film gauge to measure the thickness of the applied product.

Why is it useful to have a demonstration?

Spraylat encourage those that enquire to have a free demonstration as it teaches them everything there is to know

remove.

What do Spraylat get out of giving demonstrations for free?

Demonstrations give Spraylat better insight in to the needs of the customer which means they can to give their professional opinion on which product to recommend. Free demonstrations also highlights the level of customer service Spraylat are willing to provide, with their main concern being the wellbeing of their customers' projects, whilst signifying why Protectapeel will save time and money.

Some construction sites spend unnecessary amounts of money on cleaning costs when using alternative protection, or indeed no protection. Some

For many construction projects, a common problem which arises is ensuring a pristine finish of the build whilst trying to meet deadlines and keep costs down.

Spraylat International offer Protectapeel as the solution. Protectapeel will protect surfaces on construction sites to help avoid damage and subsequent cleaning or replacements.

Spraylat offer free demonstrations and applicator training of Protectapeel for anyone interested in learning about the product and its benefits.

What is Protectapeel?

Protectapeel is a liquid applied temporary peelable coating used to protect surfaces throughout the build process.

Protectapeel can be applied to any non-porous surface by spray gun or roller making it ideal for 3D shapes. The coating dries to form a tough film which protects against dirt, abrasions and paint overspray.

Protectapeel works all year round as it is weather resistant,

once the protection is no longer needed, simply peel it from the surface and condense in to a small ball. Protectapeel can be returned to Spraylat for recycling or disposed in domestic waste.

Protectapeel's effortless application, adhesion and protection benefits also contribute to saving time. Protectapeel removes the need to cut protection to size or reapply it. The protective coating also saves time by eliminating the requirement to arrange cleaning and replacements, ultimately avoiding delays for hand-over.

As Protectapeel removes the need for cleaners and replacements, it also saves projects money, Spraylat found construction companies who use Protectapeel save on average 30% on cleaning costs

What happens during a demonstration?

Spraylat send their application technician to the construction site to meet the potential customer of their protective coatings and will take them

“Free demonstrations also highlights the level of customer service Spraylat are willing to provide”

about Protectapeel and the services Spraylat offer. “The product looks great and we’re impressed with the potential scope of uses it can be put to” stated a project manager for Galliford Try, who recently received a demonstration. They also described the application technician as a “real asset to the company”.

Having a free demonstration carried out directly on the construction site gives the potential customer and their team the opportunity to see the capability of the protective coatings during the day-to-day happenings on site.

A demonstration gives the team the chance to apply Protectapeel themselves to see how easy it is to apply and

spend even more on having to replace the damaged surfaces. One primary aim of these demonstrations is for Spraylat to show their potential customers that there is a better way of protecting windows and other surfaces from dirt and abrasion without having to incur these large, unnecessary costs. Spraylat International want companies to gain the understanding of why Protectapeel is the best product on the market for protection against dirt and scratches.

Spraylat International Ltd have been manufacturing temporary protective peelable coatings in the UK since 1992 and continue to ensure their coatings are of the best quality.
