

## The Environmentally Smart Solution

Spraylat International Ltd is committed to designing, manufacturing and providing our customers with Environmentally Smart products. We believe in providing our customers with smart solutions, smart products, smart ways to protect the environment and smart ways to help reduce carbon footprints.

### Why is Protectapeel Environmentally Smart?

Using Protectapeel to protect your vulnerable surfaces helps to;

- Prevent damage
- Reduce cleaning costs
- Reduce replacements of damaged surfaces

By preventing damage such as overspray, scratches, dust and dirt transfer, you are reducing your cleaning costs and the need to use harsh and harmful chemicals to remove stubborn substances. Protectapeel is simply peeled from the surface, taking all dirt, paint and dust with it, with no need to use harsh cleaning chemicals or removers.

When you protect your surfaces from damage with Protectapeel you are reducing the need to replace damaged surfaces;

- Reduced replacements = Reduced disposal costs
- Reduced replacements = Reduced amount of additional energy, transportation and power used
- Reduced replacements = Reduced carbon footprint\*

### What can Protectapeel do for me?

Protectapeel offers you a smart way to protect all your vulnerable surfaces, no matter what size or shape. Protectapeel is liquid applied, by airless spray or roller, you apply it directly to the surfaces that need protecting, no cutting to size, no off cuts, no wastage, just smart protection and all from a water based product.

Protectapeel protects your surfaces for 9-12 months in one single application; there is no need to replace the protection unlike common films that need to be replaced regularly. When required the protective coating is simply removed by hand peeling, it can then be returned to the supplier for recycling or simply disposed of in domestic waste.

\* Carbon Footprint is the amount of greenhouse gas emissions caused by an organization, event, product or person.
