

Temporary Protective Vehicle Film

Protectapeel has been used since the early 1950's to protect vehicles during manufacture and transit. Damage to vehicles in transit is a major problem for car manufacturers, one that they invest a great amount of time and money trying to overcome. The most common type of damage to finished vehicles is scratching on the doors, bumpers and wheel rims. Whilst there are protection methods available such as; plastic wrapping, foam blocks and protective tape, the effectiveness can be questionable.

Protectapeel Vehiclestrip is a liquid applied protective coating designed to protect vehicles from damage through manufacture, transportation and storage. Protectapeel Vehiclestrip can be applied by airless spray or roller, a key advantage is it is liquid applied - meaning it is easily applied to uneven surfaces, no cutting to size and no wastage.

The liquid applied coating dries to form a tough protective film that will protect the vehicles for up to 6 months. When required Protectapeel Vehiclestrip is simply removed by hand peeling.
